## **Internships in Environmental & Long-Term Policy**

We invite applications for internships in support of our research on international and comparative environmental policy, the effectiveness and management of long-term policies, as well as modeling of political decisions.

Our activities include

- basic and applied research,
- collaboration on the national, European, and global levels,
- research on national, European, and international advisory boards,
- teaching, as well as
- advisory services for decision-makers.

Typically, interns will support research, publication, and administrative activities. They will be able to set aside time to work on their own projects, e.g. their M.A. or B.A. thesis. Interns will receive full access to the infrastructure and facilities of the institute.

We are particularly interested in students of political science, economics, law, related social science disciplines, as well as those with a transdisciplinary background, yet outstanding candidates with different backgrounds will be considered. Command of the English language is required. Familiarity with environmental policy, long-term policy issues, and/or social science methodology are desirable, but not a prerequisite.

The institute regrets that it cannot offer financial support.

Further information can be found at <http://www.sprinz.org>. Applications and inquiries, including a *short* letter of motivation and a curriculum vitae, are accepted on a continuing basis. They should be directed, by email, to the address indicated above.
