Unequal Access: How Public Library Closures Affect Educational Performance with Gregory Gilpin

Local public institutions, such as public libraries, offer access to low-cost educational resources, potentially reducing children's human capital disparities. However, between 2008 and 2019, 766 public library outlets closed across the U.S., removing access to these valuable resources. This study examines the impact of public library outlet closures on children's library use and educational performance in nearby school districts. Using geo-located data and an event study approach, we find that library use decreases by 25-31 pp, and reading and math scores decline by 0.021 and 0.046 standard deviations.
