

# Hi-Wi position

**fieldwork and data collection in behavioural assessments**

We offer a HiWi position for helping with behavioural and problem-solving experiments with small mammals.

The student assistant will participate in the fieldwork required to individually mark the animals, then be in charge of the camera-trap system that will collect data on the behavioural innovations of free-living animals. The experiment requires daily attendance for short periods of time. The work takes place in Potsdam, Gülpe and/or Uckermarck.
