

Policy Brief

From Degradation to Resilience: Policy Recommendations for Sustainable Rangeland Management in Namibia

Insights from the German-Namibian research project NamTip

The Policy Brief will be published here very soon.

The NamTip Project

The collaborative German-Namibian research project “NamTip – A Namibian Perspective on Desertification Tipping Points in the Face of Climate Change” aims to better understand the development of ecological tipping points in dryland rangelands by assessing desertification and woody plant encroachment processes. It also explores management options for preventing such tipping points and restoring degraded rangeland ecosystems.
